

# Galaxies, Cosmology and Dark Matter

---

Lecture given by  
Ralf Bender  
USM

Script by:  
Christine Botzler, Armin Gabasch,  
Georg Feulner, Jan Snigula

Summer semester 2000

# Contents

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	History . . . . .	4
1.2	Orders of Magnitude . . . . .	9
1.3	Basic open questions: . . . . .	10
1.4	Bibliography . . . . .	11

<b>2 Galaxy Morphology and Classification</b>	<b>14</b>
2.1 Galaxy Classification Schemes . . . . .	15
2.2 Luminosities of Bulges and Disks . . . . .	32
2.3 Pitch Angle as a Function of the Hubble-Type . . . . .	35
2.4 Other Galaxy Types . . . . .	36
2.5 Mass-Luminosity Ratios . . . . .	56
2.5.1 Luminosity Function of Schechter . . . . .	58
<b>3 Chemical Evolution</b>	<b>63</b>
3.1 Production and Emission of the Elements . . . . .	67
3.2 Initial Mass Function (IMF) . . . . .	76
3.3 Star Formation Rate . . . . .	80

3.4	Basic Chemical Evolution Model . . . . .	81
3.5	Solution of the Chemical Evolution Equations . . . . .	86
3.5.1	Instantaneous Recycling Approximation . . . . .	90
3.5.2	Closed-Box Model . . . . .	92
<b>4</b>	<b>Stellar and Galactic Dynamics</b>	<b>97</b>
4.1	Relaxation of Stellar Systems . . . . .	99
4.2	The Collisionless Boltzmann Equation . . . . .	109
4.3	The Jeans Equations . . . . .	111
4.3.1	0th Moment of the Boltzmann Equation in $v$ . . . . .	111
4.3.2	1st Moment of the Boltzmann Equation in $v$ . . . . .	112
4.4	The Virial Equations . . . . .	123

<b>5</b>	<b>Spiral Galaxies</b>	<b>132</b>
5.1	Components of Spiral Galaxies . . . . .	133
5.2	Radial Brightness and Density Profiles . . . . .	134
5.3	Characteristic Parameters of Bulges and Disks . . . . .	137
5.4	Globular Cluster Systems of Galaxies . . . . .	138
5.5	Star Formation History in Spirals . . . . .	141
5.6	Stellar Population of the Galactic Bulge . . . . .	151
5.7	Stellar Population in the Solar Neighbourhood . . . . .	155
<b>5</b>	<b>Spiral Galaxies</b>	<b>164</b>
5.8	Rotation of Spirals . . . . .	165
5.8.1	Rotational Properties of Exponential Disks . . . . .	165

5.8.2	Experimental Determination of the Rotation of Spiral Galaxies . . . . .	171
5.8.3	The Tully-Fisher Relation . . . . .	175
5.9	Dark Matter in Spiral Galaxies . . . . .	177
5.9.1	Dark Matter from Rotation Curves . . . . .	177
5.9.2	Dark Matter concentrated in the Milky Way disk? . . . . .	184
5.9.3	Mass Determination of the Milky Way at Large Radii: . . . . .	193
5.10	The Orbits of Stars in Disks: The Epicycle Approximation . . . . .	197
5.11	Stability of Disks . . . . .	203
5.12	Spiral Structure in Disks . . . . .	204
5.12.1	Spiral Structure and Star Formation . . . . .	208
5.13	Simulations of the Spiral Structure . . . . .	209
5.13.1	Spontaneous Spiral Structure . . . . .	209

5.13.2 Tidal Spiral Structure . . . . .	214
<b>6 Dwarf Galaxies</b>	<b>219</b>
6.1 Overview . . . . .	220
6.2 Stellar Populations and Chemistry of Dwarf Galaxies . . . . .	230
6.3 Kinematics of Dwarf Galaxies . . . . .	238
6.4 Neutrino Phase Space Density in Comparison with the Phase Space Density of Dark Matter in Dwarf Galaxies . . . . .	248
<b>7 Elliptical Galaxies</b>	<b>252</b>
7.1 Overview . . . . .	253
7.2 Global Parameters . . . . .	256
7.2.1 Stellar Density Profiles of Elliptical Galaxies . . . . .	256

7.2.2	Density Profiles of the Core Regions of Elliptical Galaxies . . . . .	262
7.3	Isophotes and the Shape of Elliptical Galaxies . . . . .	270
7.3.1	Three-Dimensional Shape . . . . .	270
7.3.2	Shape of the Isophotes of Elliptical Galaxies . . . . .	276
7.4	Dynamics and Kinematics . . . . .	279
7.4.1	Stellar Dynamics of Elliptical Galaxies . . . . .	279
7.4.2	Flattening of Elliptical Galaxies and Bulges – An application of the Tensor Virial Theorem . . . . .	286
7.4.3	Counter-Rotating Nuclei . . . . .	291
7.4.4	Results of the Kinematics of Elliptical Galaxies . . . . .	294
7.5	Mass-to-Light Ratios . . . . .	295
<b>7</b>	<b>Elliptical Galaxies</b>	<b>296</b>

7.6	Mass Determination for Spherical Galaxies using Velocity Dispersion Profiles . . . . .	297
7.7	Fundamental Plane of Elliptical Galaxies . . . . .	305
7.8	Hot X-Ray Gas around Elliptical Galaxies . . . . .	310
7.8.1	Properties of the Gas Haloes . . . . .	310
7.8.2	Mass Determination using X-Ray Gas . . . . .	314
7.9	Stellar Populations of Elliptical Galaxies . . . . .	317
7.10	Why do Elliptical Galaxies exist? . . . . .	323
