| <b>8</b> | <b>Mergers of Galaxies</b>    | <b>328</b> |
| <b>9</b> | <b>Active Galactic Nuclei</b> | <b>343</b> |
| 9.1      | AGN Types . . . . .           | 345        |
| 9.1.1    | Radio Galaxies . . . . .      | 345        |
| 9.1.2    | Quasars . . . . .             | 347        |

|           |   |            |
|-----------|---|------------|
| 9.1.3     | BL Lac Objects . . . . .                                  | 351        |
| 9.1.4     | Seyfert Galaxies . . . . .                                | 352        |
| 9.2       | Structure of the Active Galactic Nuclei . . . . .         | 353        |
| 9.2.1     | Sizes . . . . .   | 353        |
| 9.2.2     | Luminosity source . . . . .                               | 355        |
| 9.3       | The Unified Model of the Active Galactic Nuclei . . . . . | 363        |
| <b>10</b> | <b>The Local Universe</b>                                 | <b>367</b> |
| 10.1      | The Local Group . . . . .                                 | 369        |
| 10.2      | The Supergalactic Plane . . . . .                         | 374        |
| 10.3      | The Distribution of Nearby Groups . . . . .               | 380        |
| 10.4      | The Large–Scale Distribution of Galaxies . . . . .        | 382        |

|   |            |
|---|------------|
| <b>11 Gravitational Lensing</b>                             | <b>388</b> |
| 11.1 Basics of Gravitational Lensing . . . . .              | 393        |
| 11.2 Lensing Geometry and Lens Equation . . . . .           | 400        |
| 11.3 Einstein radius and critical surface density . . . . . | 402        |
| 11.4 Magnification by a point mass lens . . . . .           | 407        |
| 11.5 Effective Lensing Potential . . . . .                  | 410        |
| <br>  |            |
| <b>12 Clusters and Groups of Galaxies</b>                   | <b>420</b> |
| 12.1 Selection Criteria for Clusters and Groups . . . . .   | 421        |
| 12.1.1 Abell's Catalog of Rich Clusters (1958) . . . . .    | 421        |
| 12.1.2 Tully's Nearby-Galaxy-Catalog . . . . .              | 423        |
| 12.1.3 The Rood-Sastry Classification System . . . . .      | 424        |

|        |   |     |
|--------|---|-----|
| 12.2   | Nearby Galaxy Clusters . . . . .                            | 426 |
| 12.2.1 | Virgo Cluster . . . . .                                     | 426 |
| 12.2.2 | Coma Cluster . . . . .                                      | 430 |
| 12.3   | Luminosity Functions . . . . .                              | 433 |
| 12.4   | Characteristic Time Scales for Groups and Cluster . . . . . | 442 |
| 12.5   | X-Ray Gas in Galaxy Clusters . . . . .                      | 444 |
| 12.5.1 | Properties of the X-Ray Gas . . . . .                       | 445 |
| 12.5.2 | Cooling Flows . . . . .                                     | 448 |
| 12.6   | Masses of Galaxy Clusters . . . . .                         | 450 |
| 12.6.1 | Masses from X-Ray Halo Equilibrium . . . . .                | 450 |
| 12.6.2 | Masses from Gravitational Lensing . . . . .                 | 451 |
| 12.6.3 | Typical Masses of Rich Clusters . . . . .                   | 457 |

|   |            |
|---|------------|
| 12.6.4 Typical Masses of Galaxy Groups . . . . .                            | 458        |
| <b>13 The Homogeneous Universe</b>  | <b>459</b> |
| 13.1 The Big Bang Scenario:<br>basic observations and assumptions . . . . . | 460        |
| 13.2 The Robertson–Walker Metric . . . . .                                  | 468        |
| 13.3 The Friedmann Equations . . . . .                                      | 470        |
| 13.4 Basic Cosmological Parameters . . . . .                                | 472        |
| 13.5 The Redshift . . . . .   | 476        |
| 13.6 Dynamics of Homogeneous Universes . . . . .                            | 478        |
| 13.7 Evolution of Physical Properties . . . . .                             | 486        |
| 13.7.1 Intrinsic Luminosity and Observed Flux . . . . .                     | 486        |
| 13.7.2 Physical Sizes and Angular Diameters . . . . .                       | 494        |

|  |            |
|--|------------|
| 13.7.3 Surface Brightness . . . . .                            | 500        |
| <b>14 The Early Universe</b>                                   | <b>502</b> |
| 14.1 The Cosmic Microwave Background . . . . .                 | 503        |
| 14.2 The Decoupling of the Radiation . . . . .                 | 510        |
| 14.3 Primordial Nucleosynthesis . . . . .                      | 514        |
| <b>15 Structure Formation in the Universe</b>                  | <b>518</b> |
| 15.1 The Linear Growth of Structure . . . . .                  | 519        |
| 15.2 Non-linear Growth: The Spherical Collapse Model . . . . . | 532        |
| 15.3 Different Types of Dark Matter . . . . .                  | 544        |
| 15.4 N-Body Simulations . . . . .                              | 547        |
| 15.5 Angular Power Spectrum of CMB Fluctuations . . . . .      | 555        |
